## Pearson Edexcel

## Mark Scheme (Provisional)

## Summer 2021

Pearson Edexcel International Advanced Level In Biology (WB13) Paper 01 Practical Skills in Biology I

## Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

## Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

## General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response

## Using the Mark Scheme

Examiners should look for qualities to reward rather than faults to penalise. This does NOT mean giving credit for incorrect or inadequate answers, but it does mean allowing candidates to be rewarded for answers showing correct application of principles and knowledge. Examiners should therefore read carefully and consider every response: even if it is not what is expected it may be worthy of credit.

The mark scheme gives examiners:

- an idea of the types of response expected
- how individual marks are to be awarded
- the total mark for each question
- examples of responses that should NOT receive credit.
/ means that the responses are alternatives and either answer should receive full credit.
( ) means that a phrase/word is not essential for the award of the mark, but helps the examiner to get the sense of the expected answer. Phrases/words in bold indicate that the meaning of the phrase or the actual word is essential to the answer. ecf/TE/cq (error carried forward) means that a wrong answer given in an earlier part of a question is used correctly in answer to a later part of the same question.

Candidates must make their meaning clear to the examiner to gain the mark. Make sure that the answer makes sense. Do not give credit for correct words/phrases which are put together in a meaningless manner. Answers must be in the correct context.

## Quality of Written Communication

Questions which involve the writing of continuous prose will expect candidates to:

- write legibly, with accurate use of spelling, grammar and punctuation in order to make the meaning clear • select and use a form and style of writing appropriate to purpose and to complex subject matter • organise information clearly and coherently, using specialist vocabulary when appropriate.

Full marks will be awarded if the candidate has demonstrated the above abilities.
Questions where QWC is likely to be particularly important are indicated (QWC) in the mark scheme, but this does not preclude others.

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 1a | An answer that includes five of the following points. <br> - description of \{bacteria grown (on nutrient agar) / bacterial lawn\} / bacterial broth (1) <br> - filter paper discs soaked in plant extract (placed on agar) / plant extract placed in well (cut in agar) / plant extract added to broth (1) <br> - control variable described (1) <br> - one safety aspect described (1) <br> - incubate for suitable time (1) <br> - clear zone around \{disc / well\} \{measured / scored / turbidity measured (1) | Accept microbe <br> e.g. disc size / extract volume / temperature <br> e.g. flaming / dish lid / use autoclave / safe temperature quoted (<32 C) <br> Accept 24 hours to 1 week <br> Accept cloudiness | (5) |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| 2(a)(i) | An answer that includes the following three points. | Accept seeds dried |  |
|  | • the water content is reduced (1) <br> • the seeds are x-rayed (1) | Accept low oxygen environment |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| 2(a)(ii) | An answer that includes the following points. <br> - the \{number of different / variety of\} species (of living <br> organisms) in an area / stated area (1) <br> - the genetic differences within species of living organisms (1) | Accept genetic variety |  |

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 2(b)(i) | A description that includes 4 of the following points: <br> - fixing root tip described (1) <br> - $\quad$ stain used (1) <br> - description of maceration / squashing (1) <br> - view through high power microscope (1) <br> - count of number of dividing cells and divide by total number of cells (1) | e.g. heating with conc. HCl <br> Accept magnification quoted $>/=100 x$ | (4) |

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 2(b)(ii) | An answer that includes the following points. <br> - read MI from graph <br> (1) <br> - rearrange equation <br> $\mathrm{MI}=$ no. of cells in mitosis $\div$ total number of cells to calculate total number of cells (1) <br> - substitute values in this equation and correct answer (1) | $\begin{aligned} & \text { e.g. } 5(\%) \\ & \text { total number of cells }=\text { no. of cells in mitosis } \\ & \div M I \\ & \text { total no. of cells }=14 \div 0.05=280 / \mathrm{T}= \\ & 1400 \div 5=280 \end{aligned}$ <br> correct answer with no working gains 3 accept $\mathrm{T}=14 / 5$ for 2 | (3) |

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 2(b)(iii) | A table drawn showing: <br> - suitable table (drawn) (1) <br> - headings root length with units, mitotic index with units (1) <br> - data correctly entered (1) | 2 columns and 6 rows or vice versa units in cells negates this mark | (3) |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| 2(b)(iv) | A description which includes the following points: <br> - the \{treated / aged\} seeds have a lower mitotic index than <br> the untreated seeds (1) |  |  |
|  | - the longer the treatment the more the mitotic index is <br> reduced / 14 days more than 4 days (1) |  |  |
|  | \{optimum / maximum\} mitosis occurs in longer roots with <br> greater aging (1) | Accept mitosis starts later in more aged <br> roots |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| 2(b)(v) | A description which includes the following points: |  |  |
|  | $\bullet$ experiment repeated (1) |  | (2) |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| 3a | $\bullet$ number of grains germinated (1) | Accept percentage germination (of <br> pollen grains) |  |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| 3b | An explanation that includes the following points: <br> - because it might affect \{(pollen grain) germination / enzymes <br> (involved in germination)\} (1) |  |  |
| - it is (thought to be) the optimum for \{(pollen grain) germination |  |  |  |
| / enzymes (involved in pollen germination)\} (1) |  |  |  |$\quad$| (2) |
| :--- |

| Questi <br> on <br> Numb <br> er | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| 3cii | A description that includes the following points: |  |  |
| $\bullet \quad$ (all concentrations of) boric acid enhance germination (1) |  |  |  |
| $\bullet \quad$germination is higher in 100 mg dm <br>  <br> germination shows optimum value at $100 \mathrm{mg} \mathrm{dm}^{-3}(1)$ | Accept optimum between 0 <br> and 200 <br> Allow consequential error |  |  |

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 3di | A calculation that includes: <br> - calculation of increase in rate <br> - calculation of percentage increase in rate (1) | Accept values from 211 to 214 for 0 at 2 hrs |  |
|  |  | e.g. rate at 0 is $212 \div 2=106$ difference $=\{130.5-106 / 24.5\}$ |  |
|  |  | $(24.5 \div 106) \times 100=23(\%)$ ignore decimal places |  |
|  |  | $130.5-106 \div 130.5=18.8$ gets 1 |  |
|  |  | alternatives |  |
|  |  | $\begin{aligned} & \text { 1. rate at } 0 \text { is } 211 \div 2=105.5 \\ & =\{130.5-105.5 / 25\} \end{aligned}$ |  |
|  |  | $(25 \div 105.5) \times 100=23(\%)$ ignore decimal places |  |
|  |  | 2. rate at 0 is $213 \div 2=106.5$ |  |
|  |  | $=\{130.5-106.5 / 24\}$ |  |
|  |  | $(24 \div 106.5) \times 100=22(\%)$ ignore decimal places |  |
|  |  | 3. rate at 0 is $214 \div 2=107$ |  |
|  |  | $(23.5 \div 107) \times 100=22(\%)$ ignore decimal places |  |
|  |  | $130.5-106 \div 130.5=18.8$ gets 1 |  |
|  |  | 130.5-105.5 $\div 130.5=19.2$ gets 1 |  |
|  |  | $130.5-106.5 \div 130.5=18.3$ gets 1 |  |
|  |  | $130.5-107 \div 130.5=18$ gets 1 |  |
|  |  | Correct answer with no working gains 2 marks (2) | (2) |

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 3dii | An answer that includes five of the following points: <br> - make (100, 200, $300 \mathrm{mg} \mathrm{dm}^{-3}$ ) boric acid solutions from 500 $\mathrm{mg} \mathrm{dm}{ }^{-3}$ solution by dilution (1) <br> - control variable identified (1) <br> - view through high power of microscope (1) <br> - suitable method for measuring pollen tube length described (1) <br> - record results every hour for 4 hours (1) | Ignore serial <br> e.g. pH , sucrose concentration, temperature, light <br> Accept magnification quoted $>/=100 x$ <br> e.g. stage micrometer and graticule | (4) |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| 3(e) | An answer that includes the following: |  |  |
|  | \{both / germination and growth\} show optimum at 100 mg dm <br>  <br> (1) | for growth boric acid concentrations above 100 mg dm <br>  <br> inhibitory whereas for germination all concentrations above <br> $100 \mathrm{mg} \mathrm{dm}^{-3}$ are stimulatory (1) | (2) |
