MARK SCHEME

Maximum Mark: 75

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

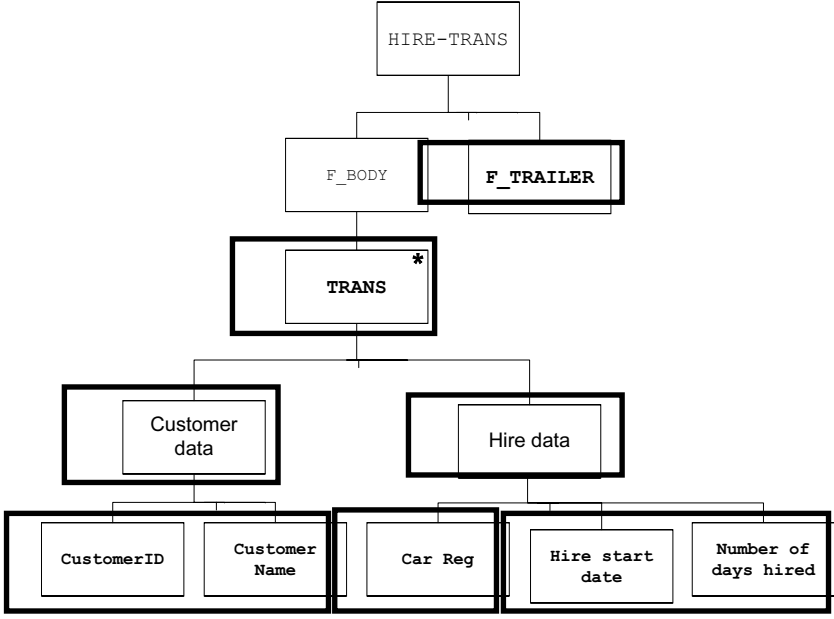

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2016 series for most Cambridge IGCSE[®], Cambridge International A and AS Level components and some Cambridge O Level components.

Question	Answer	Marks												
4 (a) (i)	a03, h07, a23 accept in any order, must be lower case	1												
(ii)	The car must <u>pass</u> (both) brake test and tyres test	1												
(b)	<pre> retestAllowed(ThisCar) 1 If (<u>testBrakes(ThisCar, pass) and testTyres(ThisCar, fail)</u>) <u>or (testBrakes(ThisCar, fail) and testTyres(ThisCar, pass))</u> 1 </pre> <p>(one mark per bold underlined all correct) accept another variable instead of ThisCar, but must be same throughout.</p>	3												
(c) (i)	a07 [p03] must be [] must be lower case, but don't penalise twice, so follow through from part(b)	2												
(ii)	[p05, m04]	1												
(iii)	[]	1												
(d)	[]	1												
5 (a) (i)	<table border="1"> <thead> <tr> <th>Mark</th> <th>Description</th> <th>Expected result (Grade)</th> </tr> </thead> <tbody> <tr> <td></td> <td>Normal</td> <td>FAIL/PASS/MERIT/DISTINCTION</td> </tr> <tr> <td></td> <td>Abnormal</td> <td>Error</td> </tr> <tr> <td></td> <td>Extreme/Boundary</td> <td>FAIL/PASS/MERIT/DISTINCTION</td> </tr> </tbody> </table> <p>3 × (mark + matching grade) for abnormal data accept negative values, non-integer values, Expected Result: Error 0 and marks above 100 are still acceptable values Do not accept FAIL in expected result column for Abnormal data</p>	Mark	Description	Expected result (Grade)		Normal	FAIL/PASS/MERIT/DISTINCTION		Abnormal	Error		Extreme/Boundary	FAIL/PASS/MERIT/DISTINCTION	3
Mark	Description	Expected result (Grade)												
	Normal	FAIL/PASS/MERIT/DISTINCTION												
	Abnormal	Error												
	Extreme/Boundary	FAIL/PASS/MERIT/DISTINCTION												
(ii)	(The programmer is) concerned only with the input (i.e. the mark) to the function and monitoring the expected output (i.e. the grade) // can compare expected result and actual result	1												
(b)	<p>Exception:</p> <ol style="list-style-type: none"> situation causing a crash / run-time error / fatal error 1 <p>Exception handling:</p> <ol style="list-style-type: none"> code which is called when a run-time error occurs 1 ... to avoid the program terminating/crashing 1 	3												

Page 8	Mark Scheme	Syllabus	Paper
	Cambridge International A Level – May/June 2016	9608	41

Question	Answer	Marks	
(c)	1 Open a non-existent file 2 Directory path does not exist 3 Attempt to read past the end of the file // attempt to read an empty file 4 Array subscript is out of range 5 Non-integer value / corrupt data read 6 File already open in a different mode // wrong file permissions	Max 3	
(d) (i)	09 // 9	1	
(ii)	1 Line 11 catches exceptions (only) between lines 05 and 10 2 Line 11 stops the program from crashing 3 Different exception types recognised 4 Each exception type has an appropriate message output 5 The program language has an (object) type EXCEPTION 6 ThisException is the instance of EXCEPTION which has been raised 7 EXCEPTION objects have a 'Message' property // the message property for ThisException is "Arithmetic operation resulted in an overflow"	1 1 1 1 1 1 1	Max 3
6 (a)	<p>Max 3 marks if extra states/transitions added.</p>	4	

Page 9	Mark Scheme	Syllabus	Paper
	Cambridge International A Level – May/June 2016	9608	41

Question	Answer	Marks
(b) (i)	Mark as follows: 1 Declaration for array (character or string data type) 2 FOR loop for x going from 1 to 8, generating column index used in array 3 FOR loop for y going from 1–2, 3–6, 7–8 (Accept all squares being set to 'E' and then overwritten with 'B', 'W' respectively) 4 Setting squares to 'B', 'E', 'W' (must be in quotes, accept single or double)	4
(ii)	Mark as follows: 1 Procedure heading and declaration of 2 local variables 1 2 Establishing the stopper colour – opposite to the mover 1 3 Test for piece in column 1 (x>1) // column 8 (x<8) 1 4 Test for 'E' 1 5 Correct method for moving left // for moving right 1 6 until edge of board reached 1 7 until other colour (stopper colour) encountered 1 8 until own colour encountered (PieceColour) 1 9 Correct output for cell indexes 1 (accept for moving in 1 direction only) 10 including the 'REMOVE' message 1 Note: must use given parameter identifiers: PieceColour, xCurrent, yCurrent	Max 5
(c) (i)	Classes could be designed for : <ul style="list-style-type: none"> • the board • a piece Containment (Board contains Pieces) The pieces are <u>instances/objects</u> (of the Piece class)	Max 2

Page 10	Mark Scheme	Syllabus	Paper
	Cambridge International A Level – May/June 2016	9608	41

Question	Answer	Marks
(ii)	<p>Accept any reasonable answer, for example:</p> <p>BOARD class:</p> <p>Properties:</p> <ul style="list-style-type: none"> • Number of squares / size / dimensions • Current state of all squares <p>Methods: –</p> <ul style="list-style-type: none"> • Set the starting board • Capture the finishing state of the board • Display the state of the board after each move <p>PIECE class:</p> <p>Properties:</p> <ul style="list-style-type: none"> • Starting x position • Starting y position • Current x position • current y position • Colour • State / Removed / Active <p>Methods:</p> <ul style="list-style-type: none"> • Move piece • Remove piece <p>Mark as follows: two correct responses are worth 1 mark</p> <p>Accept other classes: Game, Player</p>	Max 2

Page 11	Mark Scheme	Syllabus	Paper
	Cambridge International A Level – May/June 2016	9608	41

Programming code

6 (b) (i)

VB.NET

```
Dim Board(8, 8) As Char
Dim Row, Column As Integer
For Row = 1 To 2
    For Column = 1 To 8
        Board(Row, Column) = "B"
    Next
Next
For Row = 3 To 6
    For Column = 1 To 8
        Board(Row, Column) = "E"
    Next
Next
For Row = 7 To 8
    For Column = 1 To 8
        Board(Row, Column) = "W"
    Next
Next
```

PASCAL

```
var Row, Column : integer;
    Board : array[1..8, 1..8] of char;
begin
    for Row := 1 to 2 do
        for Column := 1 to 8 do
            Board[Row, Column] := 'B';
        end for;
    for Row := 3 to 6 do
        for Column := 1 to 8 do
            Board[Row, Column] := 'E';
        end for;
    for Row := 7 to 8 do
        for Column := 1 to 8 do
            Board[Row, Column] := 'W';
        end for;
    end for;
end.
```

Page 12	Mark Scheme	Syllabus	Paper
	Cambridge International A Level – May/June 2016	9608	41

PYTHON

```
Board = [["" for j in range(9)] for i in range(9)]
for Row in range(1, 3) :
    for Column in range(1, 9) :
        Board[Row][Column] = "B"
for Row in range(3, 7) :
    for Column in range(1, 9) :
        Board[Row][Column] = "E"
for Row in range(7, 9) :
    for Column in range(1, 9) :
        Board[Row][Column] = "W"
```

Alternative declarations of Board array :

```
Board = [[""] * 9 for i in range(9)]
```

```
Board = []
for i in range(9) :
    for j in range(9) :
        Board.append("")
```

Instead of initialising with empty string, could initialise with 'E'. this would then only require 'B' and 'W' loops later.

For example:

```
Board = [["E"] * 9 for i in range(9)] // Board = [["E"]*9]*9
for Row in range(1, 3) :
    for Column in range(1, 9) :
        Board[Row][Column] = "B"
for Row in range(7, 9) :
    for Column in range(1, 9) :
        Board[Row][Column] = "W"
```

```
Board = []
for i in range(9):
    Board.append(["E"]*9)
```

Page 13	Mark Scheme	Syllabus	Paper
