**MATHEMATICS**

**9709/43**

Paper 4 Mechanics 1 (M1)

**May/June 2017**

**1 hour 15 minutes**

Candidates answer on the Question Paper.

Additional Materials: List of Formulae (MF9)

**READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name in the spaces at the top of this page.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO **NOT** WRITE IN ANY BARCODES.

Answer **all** the questions.

Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place in the case of angles in degrees, unless a different level of accuracy is specified in the question.

Where a numerical value for the acceleration due to gravity is needed, use  $10 \text{ m s}^{-2}$ .

The use of an electronic calculator is expected, where appropriate.

You are reminded of the need for clear presentation in your answers.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

The total number of marks for this paper is 50.

This document consists of **12** printed pages.

**1** A man pushes a wheelbarrow of mass 25 kg along a horizontal road with a constant force of magnitude 35 N at an angle of  $20^\circ$  below the horizontal. There is a constant resistance to motion of 15 N. The wheelbarrow moves a distance of 12 m from rest.

**(i)** Find the work done by the man. [2]

4 A particle  $P$  moves in a straight line starting from a point  $O$ . At time  $t$  s after leaving  $O$ , the velocity,  $v$  m s<sup>-1</sup>, of  $P$  is given by  $v = (2t - 5)^3$ .

(i) Find the values of  $t$  when the acceleration of  $P$  is  $54$  m s<sup>-2</sup>. [3]

6 A car of mass 1200 kg is travelling along a horizontal road.

(i) It is given that there is a constant resistance to motion.

(a) The engine of the car is working at 16 kW while the car is travelling at a constant speed of  $40 \text{ m s}^{-1}$ . Find the resistance to motion. [2]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

(b) The power is now increased to 22.5 kW. Find the acceleration of the car at the instant it is travelling at a speed of  $45 \text{ m s}^{-1}$ . [3]
