Paper 1

**October/November 2018**

MARK SCHEME

Maximum Mark: 75

---

**Published**

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2018 series for most Cambridge IGCSE™, Cambridge International A and AS Level components and some Cambridge O Level components.

---

This document consists of **13** printed pages.

**PUBLISHED****Generic Marking Principles**

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

**GENERIC MARKING PRINCIPLE 1:**

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

**GENERIC MARKING PRINCIPLE 2:**

Marks awarded are always **whole marks** (not half marks, or other fractions).

**GENERIC MARKING PRINCIPLE 3:**

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

**GENERIC MARKING PRINCIPLE 4:**

Rules must be applied consistently e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

**GENERIC MARKING PRINCIPLE 5:**

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

**GENERIC MARKING PRINCIPLE 6:**

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Question	Answer	Marks																					
<p>1</p>	<p>1 mark for each correct line, maximum 5 marks</p> <table border="0" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="text-align: center; border: none;">Device</th> <th style="border: none;"></th> <th style="text-align: center; border: none;">Description</th> </tr> </thead> <tbody> <tr> <td style="border: 1px solid black; padding: 10px; text-align: center;">Laser Printer</td> <td style="border: none; text-align: center;">/</td> <td style="border: 1px solid black; padding: 10px;">Uses a high-intensity beam of light shone through three layers of changing pixels</td> </tr> <tr> <td style="border: 1px solid black; padding: 10px; text-align: center;">LCD Projector</td> <td style="border: none; text-align: center;">/</td> <td style="border: 1px solid black; padding: 10px;">Uses millions of micro mirrors to reflect light through a lens</td> </tr> <tr> <td style="border: 1px solid black; padding: 10px; text-align: center;">Digital Light Projector (DLP)</td> <td style="border: none; text-align: center;">/</td> <td style="border: 1px solid black; padding: 10px;">Uses plastic, resin or powdered metal to generate a physical output</td> </tr> <tr> <td style="border: 1px solid black; padding: 10px; text-align: center;">Inkjet Printer</td> <td style="border: none; text-align: center;">/</td> <td style="border: 1px solid black; padding: 10px;">Uses a static electric charge on a rotating drum to generate a physical output</td> </tr> <tr> <td style="border: 1px solid black; padding: 10px; text-align: center;">3D Printer</td> <td style="border: none; text-align: center;">/</td> <td style="border: 1px solid black; padding: 10px;">Uses liquid ink to generate a physical output</td> </tr> <tr> <td style="border: 1px solid black; padding: 10px; text-align: center;">2D Cutter</td> <td style="border: none; text-align: center;">/</td> <td style="border: 1px solid black; padding: 10px;">Uses a high-power laser to generate a physical output</td> </tr> </tbody> </table>	Device		Description	Laser Printer	/	Uses a high-intensity beam of light shone through three layers of changing pixels	LCD Projector	/	Uses millions of micro mirrors to reflect light through a lens	Digital Light Projector (DLP)	/	Uses plastic, resin or powdered metal to generate a physical output	Inkjet Printer	/	Uses a static electric charge on a rotating drum to generate a physical output	3D Printer	/	Uses liquid ink to generate a physical output	2D Cutter	/	Uses a high-power laser to generate a physical output	<p><b>5</b></p>
Device		Description																					
Laser Printer	/	Uses a high-intensity beam of light shone through three layers of changing pixels																					
LCD Projector	/	Uses millions of micro mirrors to reflect light through a lens																					
Digital Light Projector (DLP)	/	Uses plastic, resin or powdered metal to generate a physical output																					
Inkjet Printer	/	Uses a static electric charge on a rotating drum to generate a physical output																					
3D Printer	/	Uses liquid ink to generate a physical output																					
2D Cutter	/	Uses a high-power laser to generate a physical output
