Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions in Section A and **one** question from Section B.
- Answer the questions in the spaces provided
 - there may be more space than you need.

Information

- The total mark for this paper is 80.
- The marks for each question are shown in brackets
 use this as a quide as to how much time to spend on each question.
- In your responses, you should take particular care with your spelling, punctuation and grammar, as well as the clarity of your expression.
- Calculators may be used.

Advice

- Read each question carefully before you start to answer it.
- Check your answers if you have time at the end.

P 4 6 7 2 9 A 0 1 4 0

(Source: http://data.worldbank.org/indicator)

Extract 1 Bailout is over for Portugal

In Portugal, austerity meant deep cuts in the wages of public sector employees, lower pension payments and unemployment benefits and budget cuts in previously protected areas like education. Adding to the pain were higher personal income tax, value-added tax and reduced subsidies for drugs and for doctors' bills.

Portugal is also demonstrating that there are trade-offs in trying to restore growth. While growth is slowly returning, unemployment is still above 15%, which is higher than the eurozone average. Tens of thousands of workers have moved to Britain, Germany and Portuguese-speaking countries such as Brazil and Angola, in search of employment. About 120 000 left the country in 2012, out of a labour force of 5.5 million. Those who left included many young and qualified workers, even from companies that remained profitable throughout the crisis.

This

Portugal's biggest challenge may be reducing Government (public sector) debt. This has risen during the bailout programme from 94% of GDP in 2010 to 129% of GDP in 2013.

Portuguese exports were 28% of GDP in 2009 and 40% of GDP in 2013. While the crisis pushed many manufacturers into bankruptcy, the surviving businesses have used spare production capacity to aim far more aggressively at overseas markets.

15

5

10

The austerity debate is unlikely to end. Spending cuts in sectors like education have caused irreparable social and economic damage to Portugal, according to some politicians and analysts.

20

Extract 2 The mystery of why Portugal is so doomed

Adopting the euro in 1999 meant more integration with Portugal's main trade partners and lower borrowing costs, both of which should have created a boom. That is not how things turned out.

Between 2000 and 2012, Portugal's GDP per capita grew less than the US during the Great Depression of the 1930s or Japan during the 1990's. Incredibly, real GDP per capita in Portugal was higher in 2000 than it was in 2012.

5

Part of the problem is Portugal's small business culture and partly the result of too much regulation. Businesses stay small, because the laws make it hard to grow which results in low productivity.

Portugal has to fix its structural problems, for example by making it easier to hire and fire workers and to start and expand a business.

Extract 1 Coal exports

Mozambique's coal deposits are the fourth-largest in the world. The country is relying on increasing coal exports to expand its infrastructure and drive economic growth. This is despite falling global coal prices which might delay some railway and port projects. The Government is keen to attract investors to help build the infrastructure needed to exploit its offshore natural gas reserves.

The World Bank has forecast that coal and gas may generate up to US\$ 9 billion in revenues by 2032 for Mozambique, which is still poor and still recovering from the 1975–92 civil war.

Significant investment in rail and port expansion is still needed to carry the coal from the inland mines to the sea ports. With low global prices for coal because of excess supply, the Mozambican coal mining operations face an uphill battle to be competitive in the next few years, especially when so much infrastructure capacity still needs to be built. It is believed that coal prices could recover, with future demand predicted to come from India, Japan and China.

In a May 2014 economic outlook report for Mozambique, the International Monetary 15 Fund (IMF) forecast the economy growing 8% annually – one of the higher rates in Africa.

(Source: http://coal.steelguru.com/africa/17761/ mozambique_turns_to_coal_exports_despite_competition)

Extract 2 Employment and unemployment in Mozambique

Mozambique's unemployment rate was estimated to be 23.2% in 2013.

Unemployment is increasing, because the labour market is unable to absorb the hundreds of thousands of young people who try to enter the market every year.

Unemployment is particularly high amongst those with low levels of education and without any professional qualifications.

Some commentators argue that, to improve the employment situation, Mozambique's trade unions should put pressure on the government to draw up and implement a national labour policy. They also argue that this policy should seek to remove the main barriers facing young Mozambicans chasing their first job – these include employers' demands that recruits should already have many years of experience, or that they should speak English, for example.

(Source: http://allafrica.com/stories/201309190201.html)

(a) With reference to Figure 2, explain what is meant by the term exchange rate.

(4)

(b) With reference to the information provided, assess the possible causes of the deterioration in Mozambique's current account balance from 2007–2012.

(10)

(c) With reference to the information provided and your own knowledge, assess possible factors which may have contributed to changes in the rate of inflation in Mozambique.

(14)

(d) With reference to Extract 2, explain **two** ways by which the employment situation in Mozambique could be improved.

(6)

(e) Evaluate the likely impact of a significant increase in Mozambique's coal and gas exports on the country's future economic performance.

(14)
