

Mark Scheme (Results)

January 2017

Pearson Edexcel International
Advanced Subsidiary
in Economics (WEC02)
Paper 01 Macroeconomic Performance
and Policy

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

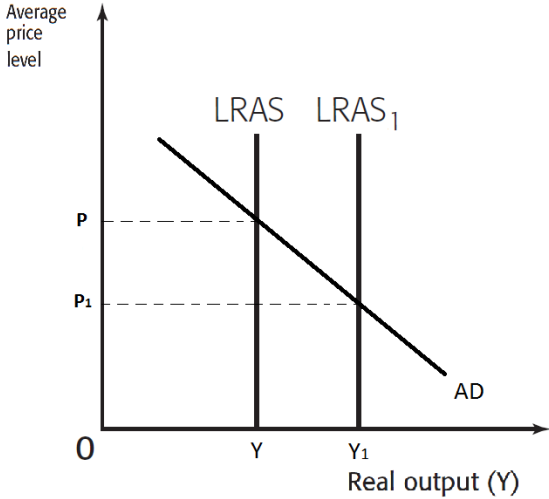

Section A: Supported multiple choice

NB: Candidates may achieve up to 3 explanation marks even if the incorrect option is selected.

NB: Candidates may achieve up to 3 marks (rejection marks) for explaining three incorrect options (provided three different reasons are offered and each option key is clearly rejected).

Question Number	Answer	Mark
1	<p>Answer C (1 mark)</p> <p>Explanation (up to 3 marks)</p> <ul style="list-style-type: none"> • Definition of balance of trade = exports- imports OR net exports (X-M) (1) • Exports>imports= surplus OR imports>exports= deficit (1) • Examples include: in each year the balance of trade is positive (1) • In each year there is a balance of trade surplus (1) • EG 2008 €225 billion/2014 €250 billion (1) <p>Rejection marks</p> <ul style="list-style-type: none"> • A is incorrect as the balance of trade is positive in each year/not a deficit (1) • B is incorrect as this would show a budget deficit (1) • D is incorrect as the data does not show the level of savings or investment (1) 	(4)

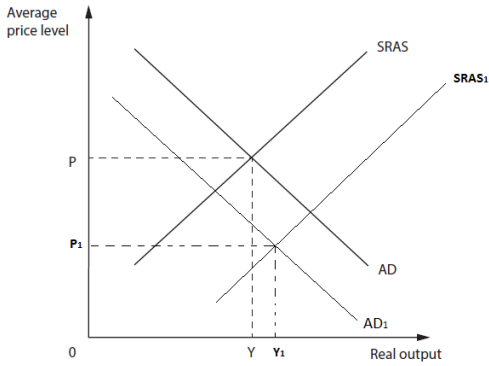

Question Number	Answer	Mark
2	<p>Answer D (1 mark)</p> <p>Explanation (up to 3 marks)</p> <ul style="list-style-type: none"> • CPI defined as a weighted basket of goods and services (1) • Inflation a sustained rise in the average price level (1) • Award marks for use of data to support correct answer / conclusion: • In 2012 CPI 3.5%, 2013 2.1%, 2014 -0.1 % (1) • CPI Increase 5-6% / decrease -0.1% (1) • 2012-2013 disinflation (1) • 2014 deflation (1) • 2012-2013 inflation greater than 2014 deflation (1) • Average prices higher in 2014 than in 2012 as increase in CPI greater than decrease in CPI (1) <p>Rejection marks</p> <ul style="list-style-type: none"> • A is incorrect as disinflation/falling rate of average price increase not deflation in 2008-2014/would have to be negative for deflation (1) • B is incorrect as inflation in 2010-2012/average prices rising at increasing rate (1) • C is incorrect as average price in 2010 were higher than 2009, just increasing at a slower rate (1) 	(4)

Question Number	Answer	Mark
3	<p>Answer C (1 mark)</p> <p>Explanation (up to 3 marks)</p> <ul style="list-style-type: none"> • Technological advances increase efficiency in the economy (1) • This leads to higher productivity (1) • Higher productivity shifts LRAS outwards/right (1) • LRAS potential output of economy (1) • LRAS shift (with justification) increases real output and decreases average price level (1) <p>Up to 2 marks for correct annotation of diagram showing outward shift in LRAS (1), increase in real output and fall in average price level (1)</p>  <p>Rejection marks</p> <ul style="list-style-type: none"> • A is incorrect because average price level will fall due to increased productivity/efficiency (1) • B is incorrect because average price level will fall and real output rise due to increased productivity/efficiency (1) • D is incorrect because real output will rise due to increased productivity/efficiency (1) 	(4)

Question Number	Answer	Mark
4	<p>Answer B (1 mark)</p> <p>Explanation (up to 3 marks)</p> <ul style="list-style-type: none"> • Minimum reserve ratios are an example of monetary policy (1) • Increase in the amount of cash reserves banks have to maintain/keep in reserve with the central bank (1) • Increase in minimum reserve ratios will decrease money supply (1) • Increased minimum reserve ratios will reduce funds for borrowing (1) • Impact of reduced borrowing may be lower AD (C + I) (1) • Lower AD mean lower real output and price level (1) • Up to 2 marks for accurate diagram showing inward shift in AD, lower real output and average price level <p>Rejection marks</p> <ul style="list-style-type: none"> • A is incorrect because increased reserve ratios likely to decrease AD and thus decrease price level/likely to happen if reserve ratio decreased (1) • C is incorrect because increased reserve ratios likely to decrease AD and this decrease real output (1) • D is incorrect because increased reserve ratios likely to decrease AD, decrease real output and increase unemployment (1) 	(4)

Question Number	Answer	Mark
5	<p>Answer C (1 mark)</p> <p>Explanation (up to 3 marks)</p> <ul style="list-style-type: none"> • Definition of per capita GDP as GDP/population (1) • If GDP grows more rapidly than population then per capita GDP will increase (1) • 2014 Per capita GDP growth because GDP growth is positive and population growth is negative (1) • Award 1 mark for any other accurate comparison • In all other years per capita GDP growth negative (1) • Up to 2 marks for accurate calculation(s) used to support the correct answer • e.g. In 2014 GDP growth is 101.3 / population growth of 99.5 = 1.01809 (increase of 1.809%) <p>Rejection marks</p> <ul style="list-style-type: none"> • A as incorrect as per capita GDP growth was negative in all years except 2014/positive in 2014 (1) • B as incorrect as per capita GDP growth was negative in 2011 and 2012 (1) • D as incorrect as GDP growth was negative in all years except 2014 thus total GDP was lower in 2014 than in 2011 (1) 	(4)

Question Number	Answer	Mark
6	<p>Answer A (1 mark)</p> <p>Explanation (up to 3 marks)</p> <ul style="list-style-type: none"> • PPI measures changes in the costs of production / index used to measure input prices / prices charged by manufacturers for finished goods (1) • The producer (wholesale) price index shows changes in costs (1) which are likely to be represented in future output prices (1) • Rising producer (wholesale) price index suggests increase in CPI in the future OR falling producer (wholesale) price index suggests decrease in CPI in the future (1) <p>Rejection marks</p> <ul style="list-style-type: none"> • B is incorrect as marginal propensity to import (MPM) measures relationship between changes income and demand for imports (1) • C is incorrect as it is more effected by output and incomes than wholesale prices/no direct link between PPI and tax revenues (1) • D is incorrect as this is more determined by government policies than wholesale prices/PPI no direct link to government spending (1) 	(4)

Question Number	Answer	Mark
7	<p>Answer B (1 mark)</p> <p>Explanation (up to 3 marks)</p> <ul style="list-style-type: none"> • Exchange rate defined as value of one currency in terms of another (1) • Increase in exchange rate most likely to increase export prices and decrease import prices/decrease net exports (1) • Falling import prices likely to lower costs for business (raw materials and wages). This may shift SRAS curve to the right (outwards) (1) • Fall in demand for (more expensive) exports and rise in demand for (cheaper) imports decreases AD and shift curve to the left (inwards) (1) • New equilibrium will therefore outcome of shift of AD curve to the left <u>and</u> SRAS curve to the right (1) <p>NB: 2 marks for correct annotation on given diagram or their own diagram showing right shift of SRAS <u>and</u> left shift of AD, impact on price level and real output.</p>  <p>Rejection marks</p> <ul style="list-style-type: none"> • A is incorrect as AD curve likely to shift left 	

	<ul style="list-style-type: none"> due to falling net exports (1) • C is incorrect as there will be a change in SRAS and AD (1) • D is incorrect as SRAS likely to shift right due to lower input costs (1) 	(4)
--	---	------------

Question Number	Answer	Mark
8	<p>Answer D (1 mark)</p> <p>Explanation (up to 3 marks)</p> <ul style="list-style-type: none"> • Definition of fiscal/budget surplus: tax receipts exceed government spending (1) • Taxation is a withdrawal from the circular flow of income OR government spending is an injection into the circular flow of income (1) • Net withdrawal occurs when taxation exceeds government spending (1) • Net withdrawal of 319 billion Krone in year ending April 2014 (1) • Likely to reduce AD as G is a component of AD (1) • Likely to reduce real output and average price level (1) <p>Rejection marks</p> <ul style="list-style-type: none"> • A is incorrect – as fiscal/budget surplus is a net withdrawal and not an injection (1) • B is incorrect – because AD and AS are influenced by other factors too/cannot determine from this data on its own (1) • C is incorrect - as this would be the balance of trade surplus not a fiscal surplus (1) 	(4)

Section B: Data response

Question Number	Answer	Mark
9 (a)	<p>Knowledge (up to 2 marks):</p> <ul style="list-style-type: none"> • Balance of payments on current account defined: (1) • Current account includes net exports of goods (1) • Current account includes net exports of services (1) • Net transfers of income/profits (1) • Current account includes net transfers (1) • Deficit is withdrawal from circular flow of income (1) • Surplus is injection into circular flow of income (1) • Net exports (X-M) major determinant of BofP (1) • If value of imports exceed value of exports then likely that BofP deficit/ If value of exports exceed value of imports then likely that BofP surplus (1) • If net exports negative then growth likely to be lower (1) <p>Application (up to 2 marks): Reference(s) to data: EG</p> <ul style="list-style-type: none"> • 2010-2012 exports exceeded imports as % of GDP (Figure 2) (1) • 2013-2014 imports exceed exports as % of GDP (Figure 2) (1) • Falling exports 2013 and 2104 at a time of decreasing growth (Figure 2) (1) • Exports falling more rapidly than imports 	

	<p>suggest increasing deficit on BofP (1)</p> <ul style="list-style-type: none"> • Helps improve the BP current account each year between 2010-2012 (1) • Worsens BP current account in 2013-2014 (1) 	(4)
--	--	------------

Question Number	Answer	Mark
9 (b)	<p>Knowledge and application (up to 6 marks):</p> <p>Identifying possible causes/reasons:</p> <ul style="list-style-type: none"> • Falling consumption (C) (1) due to income tax rates high for low earners (Extract 1)(1) lower AD and growth (1) • Falling investment (I) (1) due to high corporation tax meaning low investment (Extract 1) (1) and lower AD and growth (1) • Higher inflation (1) leading to higher costs for firms, lower SRAS (1) and lower growth (Figure 1) (1) • Falling net exports (X-M) as a percentage of GDP (1) reducing AD and lowering growth (1) supported by data from Figure 2 (1) • Infrastructure limitations/supply constraints evident due to railway building (Extract 2) (1), constraining growth (1) and inhibiting trade links (1) <p>Award up to 2 marks for an accurate diagram showing left shift in AD, decrease in average price level and real output.</p> <p>Award up to a maximum of three marks per reason</p> 	(6)

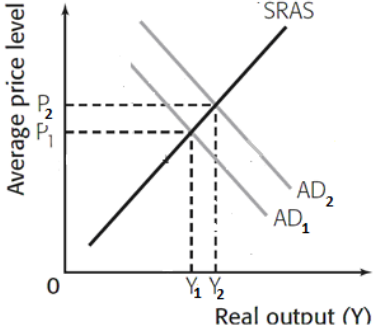

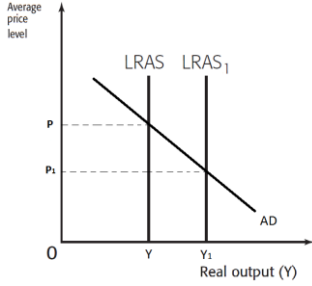

Question Number		Mark
9 (c)		(10)
Knowledge, application and analysis – indicative content		
	<p>Macroeconomic objectives include:</p> <ul style="list-style-type: none"> • Increased economic growth, control of inflation, a reduction in unemployment, equilibrium of the Balance of Payments, balanced budgets, redistribution of income, protection of the environment • Analysis of why there is likely to be a trade-off between growth and inflation • Data in Figure 1 suggests lower growth and higher inflation/higher growth and lower inflation • 2010 growth of 8.5% and inflation of 1.5% • 2014 growth of 2.2% and inflation of 3.2% • Evidence shows slowing growth so less goods and services produced to meet consumer demand with resulting inflation and low economic growth • Reasons – falling exports and rising imports (lower growth) and ‘imported inflation’ • Stagflation – low growth and high inflation • Falling exports may reduce value of currency and increase price of imports causing higher inflation • Diagram showing decrease in SRAS and fall in real output and increase average price level <p>One view may be presented as KAA and the other viewpoint may be accepted as evaluation.</p>	
Level	Marks	Descriptor
0	0	A completely inaccurate response.
1	1-2	Shows some awareness of conflicts or data references
2	3-4	Understanding of conflicts or some awareness of conflicts and data references
3	5-6	Clear understanding of conflicts and linking to data

Evaluation – indicative content		
	<ul style="list-style-type: none"> • Inflation still relatively low at 3.2% • Demand-led growth may contribute to inflation so positive correlation between growth and inflation • Long term will depend upon exports and imports • If the fall in growth is short-term, inflation may fall again in the future • If the fall in growth is long-term, inflation may continue to rise • Impact upon inflation will depend upon magnitude of change in imports and exports • Some inflation is considered beneficial to an economy <p>Supply side shock likely to have reduced inflationary pressure</p>	
Level	Marks	Descriptor
0	0	No evaluative comments.
1	1-2	For identifying evaluative comments without explanation
2	3-4	For evaluative comments supported by relevant reasoning
