Wednesday 10 June 2020

Afternoon (Time: 1 hour 15 minutes)

Paper Reference **4CH1/2C**

Chemistry

Unit: 4CH1

Paper 2C

You must have:
Calculator, ruler

Total Marks

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- Show all the steps in any calculations and state the units.
- Some questions must be answered with a cross in a box . If you change your mind about an answer, put a line through the box and then mark your new answer with a cross .

Information

- The total mark for this paper is 70.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Write your answers neatly and in good English.
- Try to answer every question.
- Check your answers if you have time at the end.

Answer ALL questions.

1 A student is given a mixture of salt solution and sand.

She wants to obtain pure water from the mixture.

(a) She separates the sand from the salt solution.

Which method of separation should she use?

(1)

- A crystallisation
- B filtration
- C fractional distillation
- D simple distillation

(b) The student then uses this apparatus to obtain pure water from the salt solution.

2 In a chromatography experiment a student uses samples of three pure food dyes, blue (B), red (R) and yellow (Y).

He also uses samples of four unknown substances, S, T, U and V.

The student puts a small drop of each substance on the pencil line.

The diagram shows the student's chromatogram at the end of the experiment.

(a) Which of the unknown substances contains only one food dye?

(1)

- A substance S
- B substance T
- C substance U
- D substance V

(b) This is the order of reactivity of four metals.

| | |
|----------------|-----------|
| most reactive | aluminium |
| ↓ | |
| | iron |
| | lead |
| ↓ | |
| least reactive | copper |

The method used to obtain a metal from its oxide depends on the reactivity of the metal.

Two possible methods are

Method 1 heating the metal oxide with carbon

Method 2 electrolysis

Explain which method should be used to obtain lead from lead(II) oxide, PbO

Include an equation for the formation of lead in your answer.

(c) The table gives information about some organic compounds in the same homologous series...

| Compound | Molecular formula | Displayed formula |
|----------------|-------------------|--|
| ethanoic acid | $C_2H_4O_2$ | |
| propanoic acid | | $ \begin{array}{c} \text{H} \quad \text{H} \\ \quad \\ \text{H}-\text{C}-\text{C}-\text{C} \\ \quad \quad // \\ \text{H} \quad \text{H} \quad \text{O} \\ \quad \quad \quad \backslash \\ \quad \quad \quad \text{O}-\text{H} \end{array} $ |
| | $C_4H_8O_2$ | $ \begin{array}{c} \text{H} \quad \text{H} \quad \text{H} \\ \quad \quad \\ \text{H}-\text{C}-\text{C}-\text{C}-\text{C} \\ \quad \quad \quad // \\ \text{H} \quad \text{H} \quad \text{H} \quad \text{O} \\ \quad \quad \quad \backslash \\ \quad \quad \quad \text{O}-\text{H} \end{array} $ |

(i) Complete the table by giving the missing information.

(3)

(ii) Name the homologous series that contains these compounds.

(1)

(d) The compounds in the table can react with alcohols to form esters.

When preparing esters, a small amount of concentrated sulfuric acid is also used.

(i) State the purpose of the acid.

(1)

(ii) Draw the displayed formula of the ester that forms when propanoic acid reacts with ethanol.

(2)

(iii) Esters have particular uses that depend on their properties.

Give an example of a property and use of esters.

(2)

6 A student is provided with a bottle containing a colourless solution X.

Solution X is thought to be dilute sulfuric acid of concentration 0.10 mol/dm^3 .

The student does some experiments on samples of solution X to try to show that it is dilute sulfuric acid.

The student adds a few drops of litmus to a sample of solution X.

The litmus turns red.

(a) The student knows that the products of the electrolysis of dilute sulfuric acid are hydrogen and oxygen.

She carries out the electrolysis using this apparatus.

(i) Suggest why the student does not use zinc electrodes in her experiment. (1)

.....

.....

(ii) State what is observed at both the anode and the cathode during the electrolysis. (1)

.....

(iii) Which of these tests shows that the gas formed at the cathode is hydrogen? (1)

- A a glowing splint relights
- B a burning splint gives a squeaky pop
- C a burning splint goes out
- D limewater turns cloudy

(b) Describe a test to show that solution X contains sulfate ions. (2)

- (c) The student then does a titration to see if the concentration of the dilute sulfuric acid is 0.10 mol/dm^3 .

She measures 25.0 cm^3 of potassium hydroxide solution into a conical flask, and then adds a few drops of indicator solution.

- (i) Name the piece of apparatus the student should use to measure 25.0 cm^3 of the potassium hydroxide solution.

(1)

- (ii) The concentration of potassium hydroxide in the solution is 0.125 mol/dm^3 .

Calculate the amount, in mol, of KOH in 25.0 cm^3 of this solution.

(2)

amount = mol

- (iii) The equation for the reaction in the titration is

Calculate the volume, in cm^3 , of 0.10 mol/dm^3 sulfuric acid needed to neutralise 25.0 cm^3 of the potassium hydroxide solution.

(3)

volume of sulfuric acid = cm^3

7 This question is about reactions involving gases.

(a) Potassium carbonate reacts with dilute hydrochloric acid to produce carbon dioxide gas.

The equation for the reaction is

Calculate the volume, in cm^3 , of carbon dioxide gas produced when 6.9 g of potassium carbonate reacts with excess dilute hydrochloric acid.

[M_r of $\text{K}_2\text{CO}_3 = 138$]

[molar volume of CO_2 at rtp = 24 dm^3]

(3)

volume = cm^3

(b) This reaction involving gases is in dynamic equilibrium at a temperature of 225 °C.

- (i) Predict the effect on the yield of CO(g) at equilibrium when the temperature is increased without changing the pressure.

Give a reason for your answer.

(2)

- (ii) Predict the effect on the yield of CO(g) at equilibrium when the pressure is increased without changing the temperature.

Give a reason for your answer.

(2)
